PUBLISHERS' NOTE.

IN the year 1894 Dr. Wallis Budge prepared for Messrs. Kegan Paul, Trench, Trübner & Co. an elementary work on the Egyptian language, entitled "First Steps in Egyptian", and two years later the companion volume, "An Egyptian Reading Book," with transliterations of all the texts printed in it, and a full vocabulary. The success of these works proved that they had helped to satisfy a want long felt by students of the Egyptian language, and as a similar want existed among students of the languages written in the cuneiform character, Mr. L. W. King, of the British Museum, prepared, on the same lines as the two books mentioned above, an elementary work on the Assyrian and Babylonian languages ("First Steps in Assyrian"), which appeared in 1898. These works, however, dealt mainly with the philological branch of Egyptology and Assyriology, and it was impossible in the space allowed to explain much that needed explanation in the other branches of these subjects—that is to say, matters relating to the archæology, history, religion, etc., of the Egyptians, Assyrians, and Babylonians. In answer to the numerous requests which have been made, a series of short, popular handbooks, on the most important branches of Egyptology and Assyriology have been prepared, and it is hoped that these will serve as introductions to the larger works on these subjects. The present is the third volume of the series, and the succeeding volumes will be published at short intervals, and at moderate prices.

PREFACE.

THIS little book is intended to form an easy introduction to the study of the Egyptian hieroglyphic inscriptions, and has been prepared in answer to many requests made both in Egypt and in England. It contains a short account of the decipherment of Egyptian hieroglyphics, and a sketch of the hieroglyphic system of writing and of the general principles which underlie the use of picture signs to express thought. The main facts of Egyptian grammar are given in a series of short chapters, and these are illustrated by numerous brief extracts from hieroglyphic texts ; each extract is printed in hieroglyphic type and is accompanied by a transliteration and translation. Following the example of the early Egyptologists it has been thought better to multiply extracts from texts rather than to heap up a large number of grammatical details without supplying the beginner with the means of examining their application. In the limits of the following pages

it would be impossible to treat Egyptian grammar at any length, while the discussion of details would be quite out of place. The chief object has been to make the beginner familiar with the most common signs and words, so that he may, whilst puzzling out the extracts from texts quoted in illustration of grammatical facts, be able to attack the longer connected texts given in my "First Steps in Egyptian" and in my "Egyptian Reading Book".

Included in this book is a lengthy list of hieroglyphic characters with their values both as phonetics and ideograms. Some of the characters have not yet been satisfactorily identified and the correctness of the positions of these is, in consequence, doubtful; but it has been thought best to follow both the classification, even when wrong, and the numbering of the characters which are found in the list of "Hieroglyphen" printed by Herr Adolf Holzhausen of Vienna.

CHAPTER I.

HIEROGLYPHIC WRITING.

THE ancient Egyptians expressed their ideas in writing by means of a large number of picture signs which are commonly called **Hieroglyphics**. They began to use them for this purpose more than seven thousand years ago, and they were employed uninterruptedly until about B. C. 100, that is to say, until nearly the end of the rule of the Ptolemies over Egypt. It is hardly probable that the hieroglyphic system of writing was invented in Egypt, and the evidence on this point now accumulating indicates that it was brought there by certain invaders who came from north-east or central Asia; they settled down in the valley of the Nile at some place between Memphis on the north and Thebes on the south, and gradually established their civilization and religion in their new home. Little by little the writing spread to the north and to the south, until at length hieroglyphics were employed, for state purposes at least, from the coast

of the Mediterranean to the most southern portion of the Island of Meroë, that is to say, over a tract of country more than 2000 miles long. A remarkable peculiarity of Egyptian hieroglyphics is the slight modification of form which they suffered during a period of thousands of years, a fact due, no doubt, partly to the material upon which the Egyptians inscribed them, and partly to a conservatism begotten of religious convictions. The Babylonian and Chinese picture characters became modified at so early a period that some thousands of years before Christ, their original forms were lost. This reference to the modified forms of hieroglyphics brings us at once to the mention of the various ways in which they were written in Egypt, *i. e.*, to the three different kinds of Egyptian writing.

The oldest form of writing is the **hieroglyphic**, in which the various objects, animate and inanimate, for which the characters stand are depicted as accurately as possible. The following titles of one Ptah-hetep, who lived at the period of the rule of the IVth dynasty will explain this; by the side of each hieroglyphic is its description.

In the above examples of picture signs the objects which they represent are tolerably evident, but a large number of hieroglyphics do not so easily lend themselves to identification. Hieroglyphics were cut in stone, wood, and other materials with marvellous accuracy, at depths varying from $\frac{1}{16}$ of an inch to 1 inch; the details of the objects represented were given either by cutting or by painting in colours. In the earliest times the mason must have found it easier to cut characters into the stone than to sculpture them in relief; but it is probable that the idea of preserving carefully what had been inscribed also entered his mind, for frequently when the surface outline of a character has been destroyed sufficient traces remain in the incuse portion of it for purposes of identification. Speaking generally, celestial objects are coloured blue, as also are metal vessels and instruments; animals, birds, and reptiles are painted as far as possible to represent their natural colours; the Egyptian man is painted red, and the woman yellow or a pinky-brown colour; and so on. But though in some cases the artist endeavoured to make each picture sign an exact representation of the original object in respect of shape or form and colour, with the result that the simplest inscription became a splendid piece of ornamentation in which the most vivid colours blended harmoniously, in the majority of painted texts which have been preserved to us the artists have not been consistent in the colouring

of their signs. Frequently the same tints of a colour are not used for the same picture, an entirely different colour being often employed; and it is hard not to think that the artist or scribe, having come to the end of the paint which should have been employed for one class of hieroglyphics, frequently made use of that which should have been reserved for another. It has been said that many of the objects which are represented by picture signs may be identified by means of the colours with which they are painted, and this is, no doubt, partly true; but the inconsistency of the Egyptian artist often does away entirely with the value of the colour as a means of identification.

Picture signs or hieroglyphics were employed for religious and state purposes from the earliest to the latest times, and it is astonishing to contemplate the labour which must have been expended by the mason in cutting an inscription of any great length, if every character was well and truly made. Side by side with cutters in stone carvers in wood must have existed, and for a proof of the skill which the latter class of handicraftsmen possessed at a time which must be well nigh pre-dynastic, the reader is referred to the beautiful panels in the Gizeh Museum which have been published by Mariette.¹ The hieroglyphics and figures of the deceased are in relief, and are most delicately and beautifully executed;

¹ See *Les Mastaba de l'Ancien Empire*. Paris, 1882, p. 74 ff.

but the unusual grouping of the characters proves that they belong to a period when as yet dividing lines for facilitating the reading of the texts had not been introduced. These panels cannot belong to a period later than the IIIrd, and they are probably earlier than the Ist dynasty. Inscriptions in stone and wood were cut with copper or bronze and iron chisels. But the Egyptians must have had need to employ their hieroglyphics for other purposes than inscriptions which were intended to remain in one place, and the official documents of state, not to mention the correspondence of the people, cannot have been written upon stone or wood. At a very early date the papyrus plant¹ was made into a sort of paper upon which were written drafts of texts which the mason had to cut in stone, official documents, letters, etc. The stalk of this plant, which grew to the height of twelve or fifteen feet, was triangular, and was about six inches in diameter in its thickest part. The outer rind was removed from it, and the stalk was divided into layers with a flat needle; these layers were laid upon a board, side by side, and upon these another series of layers was laid in a horizontal direction, and a thin solution of gum was then run between them, after which both series of layers were pressed and dried. The number of such sheets joined together depended upon the length of the roll required. The papyrus rolls which have come

¹ *Byblus hieraticus*, or *Cyperus papyrus*.

down to us vary greatly in length and width; the finest Theban papyri are about seventeen inches wide, and the longest roll yet discovered is the great Papyrus of Rameses III,¹ which measures one hundred and thirty-five feet in length. On such rolls of papyrus the Egyptians wrote with a reed, about ten inches long and one eighth of an inch in diameter, the end of which was bruised to make the fibres flexible, and not cut; the ink was made of vegetable substances, or of coloured earths mixed with gum and water.

Now it is evident that the hieroglyphics traced in outline upon papyrus with a comparatively blunt reed can never have had the clearness and sharp outlines of those cut with metal chisels in a hard substance; it is also evident that the increased speed at which government orders and letters would have to be written would cause the scribe, unconsciously at first, to abbreviate and modify the picture signs, until at length only the most salient characteristics of each remained. And this is exactly what happened. Little by little the hieroglyphics lost much of their pictorial character, and degenerated into a series of signs which went to form the cursive writing called **Hieratic**. It was used extensively by the priests in copying literary works in all periods, and though it occupied originally a subordinate position in respect of hieroglyphics, especially as regards religious texts, it at length became equal in

importance to hieroglyphic writing. The following example of hieratic writing is taken from the Prisse Papyrus upon which at a period about B. C. 2600 two texts, containing moral precepts which were composed about one thousand years earlier, were written.

Now if we transcribe these into hieroglyphics we obtain the following :—

On comparing the above hieroglyphics with their hieratic equivalents it will be seen that only long practice would enable the reader to identify quickly the abbreviated characters which he had before him; the above specimen of hieratic is, however, well written and is relatively easy to read. In the later times, *i. e.*, about B. C. 900, the scribes invented a series of purely arbitrary or conventional modifications of the hieratic characters and so a new style of writing, called **Enchorial** or **Demotic**, came into use; it was used chiefly for business or social purposes at first, but at length copies of the "Book of the Dead" and lengthy literary compositions were written in it. In the Ptolemaic period Demotic was considered to be of such importance that whenever the text of a royal decree was inscribed upon a stele which was to be set up in some public place and was intended to be read by the public in general, a version of the said decree, written in the Demotic character, was added. Famous examples of stelae inscribed in hieroglyphic, demotic, and Greek, are the Canopus Stone, set up at Canopus in the reign of Ptolemy III. Euergetes I. in the ninth year of his reign (B. C. 247—222), and the Rosetta

Stone set up at Rosetta, in the eighth year of the reign of Ptolemy V. Epiphanes (B. C. 205—182).

In all works on ancient Egyptian grammar the reader will find frequent reference to *Coptic*. The Coptic language is a dialect of Egyptian of which four or five varieties are known; its name is derived from the name of the old Egyptian city Qebt, through the Arabic *Qubṭ*, which in its turn was intended to represent the Gr. Αἰγύπτος. The dialect dates from the second century of our era, and the literature written in it is chiefly Christian. Curiously enough Coptic is written with the letters of the Greek alphabet, to which were added six characters, derived from the Demotic forms of ancient Egyptian hieroglyphics, to express sounds which were peculiar to the Egyptian language.

Hieroglyphic characters may be written in columns or in horizontal lines, which are sometimes to be read from left to right and sometimes from right to left. There was no fixed rule about the direction in which the characters should be written, and as we find that in inscriptions which are cut on the sides of a door they usually face inwards, *i. e.*, towards the door, each group thus facing the other, the scribe and sculptor needed only to follow their own ideas in the arrangement and direction of the characters, or the dictates of symmetry. To ascertain the direction in which an inscription is to be read we must observe in which way the men, and birds, and animals face, and then

facing in the opposite direction, so that to read these now we must read from right to left (No. 3).

Hieratic is usually written in horizontal lines which are to be read from right to left, but in some papyri dating from the XIIth dynasty the texts are arranged in short columns.

Before we pass to the consideration of the Egyptian Alphabet, syllabic signs, etc., it will be necessary to set forth briefly the means by which the power to read these was recovered, and to sketch the history of the decipherment of Egyptian hieroglyphics in connection with the **Rosetta Stone**.

CHAPTER II.

THE ROSETTA STONE AND THE DECIPHERMENT OF HIEROGLYPHICS.

The Rosetta Stone was found by a French artillery officer called Boussard, among the ruins of Fort Saint Julien, near the Rosetta mouth of the Nile, in 1799, but it subsequently came into the possession of the British Government at the capitulation of Alexandria. It now stands at the southern end of the great Egyptian Gallery in the British Museum. The top and right hand bottom corner of this remarkable object have been broken off, and at the present the texts inscribed upon it consist of fourteen lines of hieroglyphics, thirty-two lines of demotic, and fifty-four lines of Greek. It measures about 3 ft. 9 in. \times 2 ft. $4\frac{1}{2}$ in. \times 11 in. on the inscribed side.

The Rosetta Stone records that Ptolemy V. Epiphanes, king of Egypt from B. C. 205 to B. C. 182, conferred great benefits upon the priesthood, and set aside large revenues for the maintenance of the temples, and remitted the taxes due from the people at a period of

distress, and undertook and carried out certain costly engineering works in connection with the irrigation system of Egypt. In gratitude for these acts the priesthood convened a meeting at Memphis, and ordered that a statue of the king should be set up in every temple of Egypt, that a gilded wooden statue of the king placed in a gilded wooden shrine should be established in each temple, etc. ; and as a part of the great plan to do honour to the king it was ordered that a copy of the decree, inscribed on a basalt stele in hieroglyphic, demotic, and Greek characters, should be set up in each of the first, second, and third grade temples near the king's statue. The provisions of this decree were carried out in the eighth year of the king's reign, and the Rosetta Stone is one of the stelae which, presumably, were set up in the great temples throughout the length and breadth of the land. But the importance of the stone historically is very much less than its value philologically, for the decipherment of the Egyptian hieroglyphics is centred in it, and it formed the base of the work done by scholars in the past century which has resulted in the restoration of the ancient Egyptian language and literature.

It will be remembered that long before the close of the Roman rule in Egypt the hieroglyphic system of writing had fallen into disuse, and that its place had been taken by demotic, and by Coptic, that is to say, the Egyptian language written in Greek letters ; the widespread use of Greek and Latin among the govern-

ing and upper classes of Egypt also caused the disappearance of Egyptian as the language of state. The study of hieroglyphics was prosecuted by the priests in remote districts probably until the end of the Vth century of our era, but very little later the ancient inscriptions had become absolutely a dead letter, and until the beginning of the present century there was neither an Oriental nor a European who could either read or understand a hieroglyphic inscription. Many writers pretended to have found the key to the hieroglyphics, and many more professed, with a shameless impudence which it is hard to understand in these days, to translate the contents of the texts into a modern tongue. Foremost among such pretenders must be mentioned Athanasius Kircher who, in the XVIIth century, declared that he had found the key to the hieroglyphic inscriptions ; the translations which he prints in his *Oedipus Aegyptiacus* are utter nonsense, but as they were put forth in a learned tongue many people at the time believed they were correct. More than half a century later the Comte de Pablin stated that an inscription at Denderah was only a translation of Psalm C., and some later writers believed that the Egyptian inscriptions contained Bible phrases and Hebrew compositions.¹ In the first half of the XVIIIth century Warburton appears to have divined the existence of alphabetic characters in Egyptian, and had he pos-

¹ See my *Mummy*, p. 126.

sessed the necessary linguistic training it is quite possible that he would have done some useful work in decipherment. Among those who worked on the right lines must be mentioned de Guignes, who proved the existence of groups of characters having determinatives, and Zoëga, who came to the conclusion that the hieroglyphics were letters, and what was very important, that the cartouches, *i. e.*, the ovals which occur in the inscriptions and are so called because they resemble cartridges, contained royal names.¹ In 1802 Akerblad, in a letter to Silvestre de Sacy, discussed the demotic inscription on the Rosetta Stone, and published an alphabet of the characters. But Akerblad never received the credit which was his due for this work, for although it will be found, on comparing Young's "Supposed Enchorial Alphabet" printed in 1818 with that of Akerblad printed in 1802, that *fourteen* of the characters are identical in both alphabets, no credit is given to him by Young. Further, if Champollion's alphabet, published in his *Lettre à M. Dacier*, Paris, 1822, be compared with that of Akerblad, sixteen of the characters will be found to be identical; yet Champollion, like Young, seemed to be oblivious of the fact.

With the work of Young and Champollion we reach firm ground. A great deal has been written about the merits of Young as a decipherer of the Egyptian hiero-

¹ *De Usu et Origine Obeliscorum*, Rome, 1797, p. 465.

glyphics, and he has been both over-praised and over-blamed. He was undoubtedly a very clever man and a great linguist, even though he lacked the special training in Coptic which his great rival Champollion possessed. In spite of this, however, he identified correctly the names of six gods, and those of Ptolemy and Berenice; he also made out the true meanings of several ideographs, the true values of six letters¹ of the alphabet, and the correct consonantal values of three² more. This he did some years before Champollion published his Egyptian alphabet, and as priority of publication (as the late Sir Henry Rawlinson found it necessary to say with reference to his own work on cuneiform decipherment) must be accepted as indicating priority of discovery, credit should be given to Young for at least this contribution towards the decipherment. No one who has taken the pains to read the literature on the subject will attempt to claim for Young that the value of his work was equal to that of Champollion, for the system of the latter scholar was eminently scientific, and his knowledge of Coptic was wonderful, considering the period when he lived. Besides this the quality of his hieroglyphic work was so good, and the amount of it which he did so great, that in those respects the two rivals ought not to be compared. He certainly knew of Young's results, and the admission by him

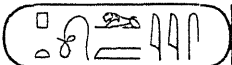

¹ I. e.,  *i*,  *m*,  *n*,  *p*,  *f*,  *t*.

² I. e.,  *i*,  *m*,  *n*.

that they existed would have satisfied Young's friends, and in no way diminished his own merit and glory.

In the year 1815 Mr. J. W. Bankes discovered on the Island of Philae a red granite obelisk and pedestal which were afterwards removed at his expense by G. Belzoni and set up at Kingston Hall in Dorsetshire. The obelisk is inscribed with one column of hieroglyphics on each side, and the pedestal with twenty-four lines of Greek. In 1822 Champollion published an account of this monument in the *Revue encyclopédique* for March, and discussed the hieroglyphic and Greek inscriptions upon it. The Greek inscription had reference to a petition of the priests of Philae made to Ptolemy, and his wife Kleopatra, and his sister also called Kleopatra, and these names of course occur in it. Champollion argued that if the hieroglyphic inscription has the same meaning as the Greek, these names must also occur in it. Now the only name found on the Rosetta Stone is that of Ptolemy which is, of course, contained in a cartouche, and when Champollion examined the hieroglyphic inscription on the Philae obelisk, he not only found the royal names there, enclosed in cartouches, but also that one of them was identical with that which he knew from the Greek of the Rosetta Stone to be that of Ptolemy. He was certain that this name was that of Ptolemy, because in the Demotic inscription on the Rosetta Stone the group of characters which formed the name occurred over and over again, and in the places where, according to the Greek, they ought

to occur. But on the Philae Obelisk the name Kleopatra is mentioned, and in both of the names of Ptolemy and Kleopatra the same letters occur, that is to say L and P; if we can identify the letter P we shall not only have gained a letter, but be able to say at which end of the cartouches the names begin. Now writing down the names of Ptolemy and Kleopatra as they usually occur in hieroglyphics we have:—

Ptolemy The cartouche for Ptolemy contains seven hieroglyphs: a square, a loop, a seated cat, a lotus flower, a papyrus, a papyrus, and a papyrus.

Kleopatra The cartouche for Kleopatra contains eleven hieroglyphs: a triangle, a seated cat, a loop, a square, a seated cat, a lotus flower, a papyrus, a papyrus, a papyrus, a papyrus, and a papyrus.

Let us however break the names up a little more and arrange the letters under numbers thus:—

Ptolemy.

1.	2.	3.	4.	5.	6.	7.
						

Kleopatra.

1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.
										

We must remember too that the Greek form of the name Ptolemy is Ptolemaios. Now on looking at the two names thus written we see at a glance that letter No. 5 in one name and No. 1 in the other are identical, and judging by their position only in the names they must represent the letter P; we see too that letter No. 2

in one name and No. 4 in the other are also identical, and arguing as before from their position they must represent the letter L. We may now write down the names thus :—

As only one of the names begin with P, that which begins with that letter must be Ptolemy. Now letter No. 4 in one name, and letter No. 3 in the other are identical, and also judging by their position we may assign it in each name the value of some vowel sound like O, and thus get :—

But the letter between P and O in Ptolemy must be T, and as the name ends in Greek with S, the last letter in hieroglyphics must be S, so we may now write down the names thus :—

Now if we look, as Champollion did, at the other ways in which the name of Kleopatra is written we shall find that instead of the letter  we sometimes have the letter  which we already know to be T, and as in the Greek form of the name this letter has an A before it, we may assume that  = A ; the initial letter must, of course, be K. We may now write the names thus :—

				5.		6.				
	P	T	O	L			S			
		3.				8.		11.		
K	L		O	P	A	T		A	T	

The sign  (No. 3) in the name Kleopatra represents some vowel sound like E, and this sign doubled (No. 6) represents the vowels AI in the name Ptolemaios ; but as  represent EE, or Ī, that is to say I pronounced in the Continental fashion, the O of the Greek form has no equivalent in hieroglyphics. That leaves us only the signs ,  and  to find values for. Young had proved that the signs  always occurred at the ends of the names of goddesses, and that it was a feminine termination ; as the Greek kings and queens of Egypt were honoured as deities, this termination was added to the names of royal ladies also. This disposes of the sign , and the letters  (No. 5) and  (No. 8) can be nothing else but M and R. So we may now write :—

P T O L M I S, *i. e.*, Ptolemy,

K L E O P A T R A, *i. e.*, Kleopatra.

Now a common title of the Roman Emperors was
 1. 2. 3. 4. 5.
 written hieroglyphically . We
 know that  = I,  = S, and  = R; and as  is
 used as a variant for the first sign in the name of
 Kleopatra given above,  must be K also. The last
 sign  is interchanged with , and we may thus
 write under the hieroglyphics the values as follows:—

				
K	I	S	R	S

that is to say *Kaisaros* or Caesar. From the different
 ways in which the name of Ptolemy is written we learn
 that  = U, and that @ has also the same value,
 and that  has the same value as , i. e., M, is also
 apparent. Now we may consider a common Greek name
 which is written in hieroglyphics ;
 we may break it up thus:—

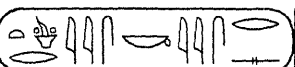

1.	2.	3.	4.	5.	6.	7.	8.	9.
								

Of these characters we have already identified Nos. 2,
 3, 5, 7, 8 and 9, and from the two last we know that
 we are dealing with the name of a royal lady. But
 there is also another common Greek name which may
 be written out in this form:—

1.	2.	3.	4.	5.	6.	7.	8.
							

and we see at a glance that the only letter that we

have not met with before is $\sim\sim\sim$. Reading the values of this last group of signs we get E R (*or* L) K S T R (*or* L) S, which can be nothing else but Eleks-ntrs or "Alexander"; thus we find that $\sim\sim\sim$ = N. Now substituting this value for sign No. 4 in the royal lady's name given above we read . E R N I . A T ; and as the Greek text of the inscription in which this name occurs mentions Berenike, we conclude at once that No. 1 sign \mathcal{J} = B, and that No. 6 sign ∇ = K. From other Greek and Latin titles and names we may obtain the values of many other letters and syllables, as will be seen from the following :—

In the Ptolemaic and Roman times the titles of the kings or emperors were often included in the cartouches, and from some of these Champollion derived

a number of letters for his Egyptian alphabet. Thus many kings call themselves , and , which appellations were known to mean "Of Ptah beloved" and "living ever". Now in the first of these  we know, from the names which we have read above, that the first two signs are P and T, *i. e.*, the first two letters of the name Ptah; the third sign  must then have the value of H or of some sound like it. If these three signs  form the name of Ptah, then the fourth sign  must mean "beloved". Now as Coptic is only a dialect of Egyptian written in Greek letters we may obtain some help from it as Champollion did; and as we find in that dialect that the ordinary words for "to love" are *mei* and *mere*, we may apply one or other of these values to the sign . In the same way, by comparing variant texts, it was found that  was what is called an ideograph meaning "life", or "to live"; now the Coptic word for "life" or "to live", is *ōnkh*, so the pronunciation of the hieroglyphic sign must be something like it. We find also that the variant spellings of  give us , and as we already know that  = N, the third sign  must be KH; incidentally, too, we discover that  has the syllabic value of *ānkh*, and that the *ā* has become *ō* in Coptic. If, in the appellation , *i. e.*, "living ever",  means "life", it is clear that  must mean "ever". Of the three signs which form the word we already know the last two,  and , for we have

seen the first in the name Ptolemy, and the second in the name Antoninus, where they have the values of T and TA respectively. Now it was found by comparing certain words written in hieroglyphics with their equivalents in Coptic that the third sign  was the equivalent of a letter in the Coptic alphabet which we may transliterate by TCH, *i. e.*, the sound which *c* has before *i* in Italian. Further investigations carried on in the same way enabled Champollion and his followers to deduce the syllabic values of the other signs, and at length to compile a classified syllabary. We may now collect the letters which we have gathered together from the titles and names of the Greek and Roman rulers of Egypt in a tabular form thus:—

 A	 H
 A or E	 H
 Ā	 KH
 or ∞ I	 or  S
 or @ or  O or U	 T
 B	 T
 P	 T
 or  M	 TCH
 or  N	 K
 or  R	 K
	 K

It will be noticed that we have three different kinds of the K sound, three of the T sound, two of the H sound, and three A sounds. At the early date when the values of the hieroglyphics were first recovered it was not possible to decide the exact difference between the varieties of sounds which these letters represented ; but the reader will see from the alphabet on pp. 31, 32 the values which are generally assigned to them at the present time. It will be noticed, too, that among the letters of the Egyptian alphabet given above there are no equivalents for F and SH, but these will be found in the complete alphabet.

CHAPTER III.

HIEROGLYPHICS AS IDEOGRAPHS, PHONETICS, AND DETERMINATIVES.

Every hieroglyphic character is a picture of some object in nature, animate or inanimate, and in texts many of them are used in more than one way. The simplest use of hieroglyphics is, of course, as pictures, which we may see from the following:—  a hare ;  an eagle ;  a duck ;  a beetle ;  a field with plants growing in it ; ★ a star ;  a twisted rope ;  a comb ;  a pyramid, and so on. But hieroglyphics may also represent *ideas*, *e. g.*,  a wall falling down sideways represents the idea of “falling” ;  a hall in which deliberations by wise men were made represents the idea of “counsel” ;  an axe represents the idea of a divine person or a god ;  a musical instrument represents the idea of pleasure, happiness, joy, goodness, and the like. Such are called **ideographs**. Now every picture of every object must have had a name, or we may say that each picture was

a word-sign ; a list of all these arranged in proper order would have made a dictionary in the earliest times. But let us suppose that at the period when these pictures were used as pictures only in Egypt, or wherever they first appeared, the king wished to put on record that an embassy from some such and such a neighbouring potentate had visited him with such and such an object, and that the chief of the embassy, who was called by such and such a name, had brought him rich presents from his master. Now the scribes of the period could, no doubt, have reduced to writing an account of the visit, without any very great difficulty, but when they came to recording the name of the distinguished visitor, or that of his master, they would not find this to be an easy matter. To have written down the name they would be obliged to make use of a number of hieroglyphics or picture characters which represented most closely the sound of the name of the envoy, without the least regard to their meaning as pictures, and, for the moment, the picture characters would have represented sounds only. The scribes must have done the same had they been ordered to make a list of the presents which the envoy had brought for their royal master. Passing over the evident anachronism let us call the envoy "Ptolemy", which name we may write, as in the preceding chapter, with the signs :—

Now No. 1 represents a door, No. 2 a cake, No. 3 a

knotted rope, No. 4 a lion, No. 5 (uncertain), No. 6 two reeds, and No. 7 a chairback ; but here each of these characters is employed for the sake of its *sound* only.

The need for characters which could be employed to express *sounds only* caused the Egyptians at a very early date to set aside a considerable number of picture signs for this purpose, and to these the name of **phonetics** has been given. Phonetic signs may be either **syllabic** or **alphabetic**, *e. g.*,  *peh*,  *mut*,  *maūt*,  *xeper*, which are syllabic, and  *p*,  *b*,  *m*,  *r*,  *k*, which are alphabetic. Now the five alphabetic signs just quoted represent as pictures, a door, a foot and leg, an owl, a mouth, and a vessel respectively, and each of these objects no doubt had a name ; but the question naturally arises how they came to represent single letters ? It seems that the sound of the *first letter* in the name of an object was given to the picture or character which represented it, and henceforward the character bore that phonetic value. Thus the first character  P, represents a door made of a number of planks of wood upon which three cross-pieces are nailed. There is no word in Egyptian for door, at all events in common use, which begins with P, but, as in Hebrew, the word for door must be connected with the root "to open" ; now the Egyptian word for "to open" is  *pt[a]h*, and as we know that the first character in that word has the sound of P and of no other letter, we may reasonably assume that the Egyptian word for "door" began with P. The third

character  M represents the horned owl, the name of which is preserved for us in the Coptic word *mīlotch* (ⲙⲟⲩⲗⲟⲩ); the first letter of this word begins with M, and therefore the phonetic value of  is M. In the same way the other letters of the Egyptian alphabet were derived, though it is not always possible to say what the word-value of a character was originally. In many cases it is not easy to find the word-values of an alphabetic sign, even by reference to Coptic, a fact which seems to indicate that the alphabetic characters were developed from word-values so long ago that the word-values themselves have passed out of the written language. Already in the earliest dynastic inscriptions known to us hieroglyphic characters are used as pictures, ideographs and phonetics side by side, which proves that these distinctions must have been invented in pre-dynastic times.

The Egyptian alphabet is as follows:—

	A (Ⲁ)		F (Ⲉ)
	Ā (Ⲁ)	 or 	M (ⲙ)
	Ā (Ⲁ)	 or 	N (ⲛ)
 or 	I (Ⲁ)	 or 	R and L (ⲣ, Ⲍ)
 or 	U (Ⲁ)		H (Ⲭ)
	B (ⲁ)		H (Ⲭ)
	P (ⲉ)		KH (Ⲭ) (Arab. خ)

	S	(ṣ)		K	(ḳ)
	S	(ṣ)		T	(ṭ)
	SH (š)	(ṣ)		T	(ṭ)
	K	(ḳ)		TH (ṯ)	(ṭ)
	Q	(ḳ)		TCH (ṭ')	(ṭ)

The Egyptian alphabet has a great deal in common with the Hebrew and other Semitic dialects in respect of the guttural and other letters, peculiar to Oriental peoples, and therefore the Hebrew letters have been added to shew what I believe to be the general values of the alphabetic signs. It is hardly necessary to say that differences of opinion exist among scholars as to the method in which hieroglyphic characters should be transcribed into Roman letters, but this is not to be wondered at considering that the scientific study of Egyptian is only about eighty years old, and that the whole of the literature has not yet been published.

Some ideographs have more than one phonetic value, in which case they are called **polyphones**; and many ideographs representing entirely different objects have similar values, in which case they are called **homophones**.

As long as the Egyptians used picture writing pure and simple their meaning was easily understood, but when they began to spell their words with alphabetic signs and syllabic values of picture signs, which had

no reference whatever to the original meaning of the signs, it was at once found necessary to indicate in some way the meaning and even sounds of many of the words so written; this they did by adding to them signs which are called **determinatives**. It is impossible to say when the Egyptians first began to add determinatives to their words, but all known hieroglyphic inscriptions not pre-dynastic contain them, and it seems as if they must have been the product of prehistoric times. They, however, occur less frequently in the texts of the earlier than of the later dynasties.

Determinatives may be divided into two groups; those which determine a single species, and those which determine a whole class. The following determinatives of classes should be carefully noted:—

Character	Determinative of	Character	Determinative of
1. 	to call, beckon	6.  or 	god, divine being or thing
2. 	man	7. 	goddess
3. 	to eat, think, speak, and of whatever is done with the mouth	8. 	tree
4. 	inertness, idleness	9. 	plant, flower
5. 	woman	10. 	earth, land
		11. 	road, to travel
		12. 	foreign land

Character	Determinative of	Character	Determinative of
13. 	nome	26. 	fish
14. 	water	27. 	rain, storm
15. 	house	28. 	day, time
16. 	to cut, slay	29. 	village, town, city
17. 	fire, to cook, burn	30. 	stone
18. 	smell (good or bad)	31. 	metal
19. 	to overthrow	32. 	grain
20. 	strength	33. 	wood
21. 	to walk, stand, and of actions performed with the legs	34. 	wind, air
22. 	flesh	35. 	foreigner
23. 	animal	36. 	liquid, unguent
24. 	bird	37. 	abstract
25. 	little, evil, bad	38. 	crowd, collection of people
		39. 	children.

A few words have no determinative, and need none, because their meaning was fixed at a very early period, and it was thought unnecessary to add any; examples

of such are  *henā*¹ "with",  *ām* "in",  *māk* "verily" and the like. On the other hand a large number of words have one determinative, and several have more than one. Of words of one determinative the following are examples:—

1.  *ām* to eat; a picture of a man putting food into his mouth  is the determinative.
2.  *ānχ* a flower; the picture of a flower  is the determinative.
3.  *sma* to slay; the picture of a knife  is the determinative, and indicates that the word *sma* means "knife", or that it refers to some action that is done with a knife.
4.  *ses* bolt; the picture of the branch of a tree  is the determinative, and indicates that *ses* is an object made of wood.

Of words of one or more determinatives the following are examples:—

1.  *renpit* flowers; the pictures of a flower in the bud , and a flower , are the determinatives; the three strokes  are the sign of the plural.

¹ Strictly speaking there is no *e* in Egyptian, and it is added in the transliterations of hieroglyphic words in this book simply to enable the reader to pronounce them more easily.

2.  *Hāp* god of the Nile; the pictures of water enclosed by banks , and running water , and a god  are the determinatives.

3.  *nemmelu* poor folk; the pictures of a child , and a man , and a woman  are the determinatives, and shew that the word *nemmelu* means a number of human beings, of both sexes, who are in the condition of helpless children.

Words may be spelt (1) with alphabetic characters wholly, or (2) with a mixture of alphabetic and syllabic characters; examples of the first class are:—

sfent a knife

āsfet wickedness

sāt a book

uāa a boat

heqer to be hungry, hunger

semehi left hand side

seses a sistrum.

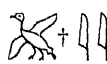

And examples of the second class are :—

1.  |  *henkset* hair, in which  has by itself the value of *hen* ; so the word might be written  or 
.
2.  *nehebet* neck, in which  has by itself the value of *neh* ; so the word might be written  as well as .
3.  |  *rexit* men and women, in which  has by itself the value of *rexit* ; thus in  the word is actually written twice, for .

In many words the last letter of the value of a syllabic sign is often written in order to guide the reader as to its pronunciation. Take the word . The ordinary value of  is *mester* "ear", but the  which follows it shews that the sign is in this word to be read *mestem*, and the determinative indicates that the word means that which is smeared under the eye, or "eye-paint, stibium". For convenience' sake we may call such alphabetic helps to the reading of words **phonetic complements**. The following are additional examples, the phonetic complement being marked by an asterisk.

	<i>mester</i>	ear
	<i>hai</i>	rain
	<i>senār</i>	storm
	<i>merhu</i>	unguent
	<i>hememu</i>	mankind.

We may now take a short extract from the Tale of the Two Brothers, which will illustrate the use of alphabetic and syllabic characters and determinatives; the determinatives are marked by *, and the syllabic characters by †; the remaining signs are alphabetic. (N. B. There is no *e* in Egyptian.)

CHAPTER VI.

NOUNS.

Nouns in Egyptian are either masculine or feminine. Masculine nouns end in U, though this characteristic letter is usually omitted by the scribe, and feminine nouns end in T. Examples of the masculine nouns are :—

 *hru* day

 *anu* scribe

 *kerhu* night,

but these words are just as often written , , and . Other examples are :—

 *ap* envoy

 *geres* sepulchre

 *neter* god

 *re* chapter, mouth.

Examples of feminine nouns are :—

	<i>šāt</i>	book
	<i>pet</i>	heaven
	<i>seḫet</i>	field
	<i>sebḫet</i>	pylon
	<i>netert</i>	goddess
	<i>tept</i>	boat.

Masculine nouns in the plural end in U or IU, and feminine nouns in the plural in UT, but often the T is not written ; examples are :—

	<i>ānḫiu</i>	living beings
	<i>āsemu</i>	the forms in which the gods appear
	<i>ḥau</i>	people who live in the Delta.
	<i>sbaui</i>	doors
	<i>suteniu netiu</i> (or <i>bātiu</i>)	Kings of the South and North
	<i>hemut</i>	women
	<i>satut</i>	daughters
	<i>meḥut</i>	offerings
	<i>āusut</i>	places.

The oldest way of expressing the **plural** is by writing the ideograph or picture sign three times, as the following examples taken from early texts will shew:—

reṭ legs

χu spirits

per houses, habitations

hemut women

nut cities

seχet fields

uat ways, roads.

Sometimes the picture sign is written once with three dots, $\begin{smallmatrix} \circ \\ \circ \\ \circ \end{smallmatrix}$ or $\circ\circ\circ$, placed after it thus:—

χu spirits

The three dots or circles $\begin{smallmatrix} \circ \\ \circ \\ \circ \end{smallmatrix}$ afterwards became modified into $\begin{smallmatrix} | \\ | \\ | \end{smallmatrix}$ or ||| , and so became the common sign of the plural.

Words spelt in full with alphabetic or syllabic signs are also followed at times by $\begin{smallmatrix} \circ \\ \circ \\ \circ \end{smallmatrix}$:—

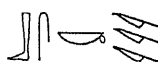

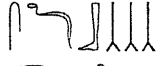

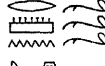

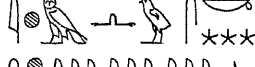

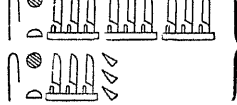

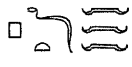

reṭ men

ḥunut young women

	<i>urāu</i>	great ones
	<i>serru</i>	little ones.

The plural is also expressed in the earliest times by writing the word in alphabetic or syllabic signs followed by the determinative written thrice :—

	<i>hāt</i>	hearts
	<i>besek</i>	intestines
	<i>ārrt</i>	abodes
	<i>gesu</i>	bones
	<i>sefeb</i>	obstacles
	<i>ermen</i>	arms
	<i>āxemu-seku</i>	a class of stars
	<i>sexet</i>	fields
	<i>seb</i>	stars
	<i>petet</i>	bows
	<i>tām</i>	sceptres.

In the oldest texts the dual is usually expressed by adding UI or TI to the noun, or by doubling the

picture sign thus :—  the two eyes,  the two ears,  the two hands,  the two lips, and the like. Frequently the word is spelt alphabetically or syllabically and is determined by the double picture sign, thus :—

the two divine souls

the double heaven, *i. e.*, North and South

the two sides

the two lights.

Instead of the repetition of the picture sign two strokes, || were added to express the dual, thus   ||  *Hāp*, the double Nile-god. But in later times the two strokes were confused with w, which has the value of I, and the word is also written   || ; but in each case the reading is *Hāpui*. The following are examples of the use of the dual :—

1.      
arit - nef texenui urui em mat
 He made two obelisks great of granite.

2.    "    "
pa texenui urui
 The two obelisks great.

3.       
- nefer hrá em suti urui*

Beautiful of face with two plumes great.

4.       
- er ámtu beḡenti urti*

Between the two pylons great.

5.        
- Bawi-fi pui en ámu Tētet*
- His double soul that which [is] in Tattu
(Busiris).

6.      
- bawi her-áb tafui*

The divine souls within the two divine Tchafui.

7.        
- bawi-fi her-ábui tafui ba*

His double soul within the two Tchafui [are] the soul

-       
- pu en Rā ba pu en Áusār*
- of Rā, [and] the soul of Osiris.

8.        
- ḡā - kuá em sati - θen*

CHAPTER VII.

THE ARTICLE.

The **definite article** masculine is  or  PA, the feminine is  TA, and the plural is  NA or  NA EN; the following examples will explain the use of the article.

1.            
na pu enti em-sa pa xepes

Those are who [are] behind the star Thigh

 the garments of Pharaoh.

The masculine indefinite article is expressed by  *uā en*, and the feminine by  *uāt*

en ; the words *uā en* and *uāt en* mean, literally, "one of". Examples are :—

1.       
qet - nef uā en beḡennu en
 He built a house with

CHAPTER VIII.

ADJECTIVES, NUMERALS, TIME, THE YEAR, ETC.

The **adjective** is, in form, often similar to the noun, with which it agrees in gender and number ; with a few exceptions it comes after its noun, thus :—

<i>χet</i>	<i>nebt</i>	<i>nefert</i>	<i>ābt</i>	<i>χet</i>	<i>nebt</i>	<i>nefemet</i>	<i>beneret</i>

Thing every, good, pure ; thing every, pleasant, sweet.

The following will explain the use of the adjective in the singular and plural.

1.
ānχ-ā *em* *tau* *en* *beti* *hefet*
 Let me live upon bread of barley white,

<i>heget-ū</i>	<i>em</i>	<i>pertu</i>	<i>teseru</i>

6.				
	<i>in-ai</i>	<i>em-bal</i>	<i>neteru</i>	<i>āaiu</i>
	I am in the presence of the gods			great.

The adjectives “royal” and “divine” are usually written before the noun, thus :—

	<i>suten an</i>	royal scribe
	<i>suten abu</i> (or <i>hemu</i>)	royal workman
	<i>suten uai</i>	royal boat or barge
	<i>suten rex</i>	royal acquaintance or kinsman
	<i>suten hent</i>	royal woman, i. e., queen
	<i>sutenu henu</i>	royal servants
	<i>neter hen</i>	divine servant, i. e., priest
	<i>neter het</i>	divine house, i. e., temple
	<i>neter atef</i>	divine father.

Adjectives are without degrees of comparison in Egyptian, but the comparative and superlative may be expressed in the following manner :—

1. 
du - set nefer em hāt - set er set

She was fair in her body more than

- 
hemt nebt enti em pa ta ter - f
 woman any who [was] in the earth the whole of it.

2.

ker

being silent.

7.					
	<i>nefer</i>	<i>setem</i>	<i>er</i>	<i>entet</i>	<i>neb</i>

The **ordinals** are formed by adding 𐌺 *nu* to the numeral, with the exception of “first”, thus :—

	Masc.		Fem.	
First	𐌸𐌹𐌺 𐌺 <i>tepi</i>		𐌸𐌹𐌺 𐌺 <i>tept</i>

and so on. From the following examples of the use of the numerals it will be noticed that the numeral, like the adjective, is placed *after* the noun, that the lesser numeral comes last, and that the noun is sometimes in the singular and sometimes in the plural.

1.

Ordinal numbers are also indicated by  *meh*, which is placed before the figure thus :—

1.  *em*  *maāu*  *meh*  *uā*  *em*  *maāu*

TIME.

The principal divisions of time are :—

	<i>hat</i>	second		<i>at</i>	minute
	<i>unnut</i>	hour		<i>hru</i>	day
	<i>ābet</i>	month		<i>renpit</i>	year
	<i>set</i>	30 years		<i>hen</i>	60 years

	<i>heh</i>	1,000,000 years		<i>tetta</i>	eternity.
 <i>sen</i> 10,000,000					

Examples of the use of these are :—

1.  *tā* - *f*  *renput*  *āst*  *her*  *her*  *renput-ā*

THE EGYPTIAN YEAR.

The year, *renpit*, plural consisted originally of twelve months, each containing thirty days; as the month contained three periods of ten days the year consisted of thirty-six weeks of ten days each. Later the Egyptians added five days¹ to the years, and thus made it equal to 365 days @@@ nnn || . Each month was dedicated to a god. The twelve months were divided into three seasons of four months each, thus:—

1. *śat* season of inundation and period of sowing.
2. *pert* season of “coming forth” or growing,
i. e., spring.
3. *śemut* season of harvest and beginning of inundation.

Documents were dated thus:—

¹ Called “epagomenal days”.

² They discovered that the true year was longer than 365 days, that the difference between 365 days and the length of the true year was equal nearly to one day in four years, and that New Year's day ran through the whole year in $365 \times 4 = 1460$ years.

It has been said above that each month was dedicated to a god, and it must be noted that the month was called after the god's name. The Copts or Egyptian Christians have preserved, in a corrupt form, the old Egyptian names of the months, which they arrange in the following order :—

		1st month of winter	=	Thoth
	"	2nd " "	=	Paopi
	"	3rd " "	=	Hathor
	"	4th " "	=	Khoiak
		1st month of spring	=	Tobi
	"	2nd " "	=	Mekhir
	"	3rd " "	=	Phamenoth
	"	4th " "	=	Pharmuthi

		1st month of spring	=	Pakhon
	”	2nd ” ”	=	Paoni
	”	3rd ” ”	=	Epep
	”	4th ” ”	=	Mesore.

The epagomenal days were called    {   }
 “the five days over (*i. e.*, to be added to) the year”.

CHAPTER IX.

THE VERB.

The consideration of the Egyptian verb, or stem-word, is a difficult subject, and one which can only be properly illustrated by a large number of extracts from texts of all periods. Egyptologists have, moreover, agreed neither as to the manner in which it should be treated, nor as to the classification of the forms which have been distinguished. The older generation of scholars were undecided as to the class of languages under which the Egyptian language should be placed, and contented themselves with pointing out grammatical forms analogous to those in Coptic, and perhaps in some of the Semitic dialects; but recently the relationship of Egyptian to the Semitic languages has been boldly affirmed, and as a result the nomenclature of the Semitic verb or stem-word has been applied to that of Egyptian.

The Egyptian stem-word may be indifferently a verb or a noun; thus  *χeper* means "to be, to become", and the "thing which has come into being". By the

addition of  the stem-word obtains a participial meaning like "being" or "becoming"; by the addition of  in the masc. and  in the fem. *χeper* becomes a noun in the plural meaning "things which exist", "created things", and the like; and by the addition of  we have  *χeperà* the god to whom the property of creating men and things belonged. The following examples will illustrate the various uses of the word:—

1.  *neter*  *uāu*  *χeper*  *em*  *sep*  *tep*

The god one [who] came into being in time primeval.

2.  *χeper*  *metet*  *nebt*  *Tem*

Came into being words all of Tem.

3.  *ān*  *χepert*  *sat*  *tu*

Not had come into being earth [and] mountains.

4.  *saut*  *χepert*  *θui*  *āat*

Guarding { thing that hath } that great.
 { come into being }

5.

ab-à *em* *bu* *neb* *mer* *ka-à*

6.

7.       
an *rex - en - tu* *xepert* *urit*

8.        
xeper-à *xeper* *xeperu*
 { I am he who } and { who made to } { the beings who }
 { came into being } { come into being } { came into being }

<i>xeperu</i>	-	<i>kuā</i>	<i>em</i>	<i>xeperu</i>	<i>en</i>				
I came		into being	in	the forms	of				

<i>xeperā</i>		<i>xeper</i>	<i>em</i>	<i>sep</i>	<i>tepi</i>				
the god Khepera, who came into being in primeval time.									

Or again, if we take a word like *āger* it will be seen from the following examples that according to its position and use in a sentence it becomes a noun, or a verb, or an adjective, or an adverb.

1.									
	<i>sma-ā</i>	<i>em</i>	<i>xu</i>	<i>sepsi</i>	<i>āger</i>				
	May I join		the spirits	holy [and]	perfect				

<i>nu</i>	<i>neter-xert</i>

2.					
	<i>sāt</i>	<i>ent</i>	<i>sāger</i>	<i>xu</i>	
	The book	of	making { perfect or strong }	{ the spirit [of the] deceased. }	

3.					
	<i>āw-f</i>	<i>netri</i>	<i>emmā</i>	<i>āgeru</i>	
	He is	divine	among	the perfect ones.	

4.      
au - *sen* *aut* *enti* *er* - *hāti-f*

her *xeperu* *nefer* *er* *ager* *sep sen*

I. e., the cattle became very fine indeed.

Stem-words in Egyptian, like those in Hebrew and other Semitic dialects, consist of two, three, four, and five letters, which are usually consonants, one or more of which may be vowels, as examples of which may be cited :—

	<i>ān</i>	to return, go or send back
	<i>ha</i>	to walk
	<i>āhā</i>	to stand
	<i>šāt</i>	to cut
	<i>rerem</i>	to weep
	<i>neka</i>	to cut
	<i>nemmes</i>	to enlighten
	<i>netnef</i>	to converse

*nemesmes*

to heap up to overflowing.

*nefemnefem*(probably pronounced *nefemtem*) to love.

The stem-words with three letters or consonants, which are ordinarily regarded as trilateral roots, may be reduced to two consonants, which were pronounced by the help of some vowel between ; these we may call primary or biliteral roots. Originally all roots consisted of one syllable. By the addition of feeble consonants in the middle or at the end of the monosyllabic root, or by repeating the second consonant, roots of three letters were formed. Roots of four consonants are formed by adding a fourth consonant, or by combining two roots of two letters ; and roots of five consonants from two trilateral roots by the omission of one consonant.

Speaking generally, the Egyptian verb has no conjugation or species like Hebrew and the other Semitic dialects, and no Perfect (Preterite) or Imperfect (Future) tenses. The exact pronunciation of a great many verbs must always remain unknown, because the Egyptians never invented a system of vocalisation, and never took the trouble to indicate the various vowel-sounds like the Syrians and Arabs ; but by comparing forms which are common both to Egyptian and Coptic, a tolerably correct idea of the pronunciation may be obtained.

There is in Egyptian a derivative formation of the

word-stem or verb, which is made by the addition of S, — or , to the simple form of the verb, and which has a causative signification; in Coptic the causative is expressed both by a prefixed S and T. The following are examples of the use of the Egyptian causative:—

1. From    *āa* to be great:—

s-āa-i

neferu-f

I made great, *i. e.*, magnified his beauties.

2. From   *ānχ* to live:—

āthū-i

3. From   *xeper* to become :—

I made to come into being his treasure-houses

[which were] flooded with things of every land.

The verb with pronominal personal suffixes is as follows :—

Sing.			<i>rex-â</i>	I know
1 com.			<i>nehem-k</i>	thou deliverest
2 m.			<i>tet-t</i>	thou speakest
2 f.			<i>sât-f</i>	he cuts
3 m.			<i>gem-s</i>	she finds
3 f.			<i>âri-n</i>	we do
Plur.			<i>mit-ten</i>	ye die
1 com.			<i>xeper-sen</i>	they become.
2 com.				
3 com.				

The commonest auxiliary verbs are  *āhā* to stand;  *un* to be;  *āu* to be;  *āri* to do;  *tā* to give; the following passages illustrate their use:—

1.  *un*  *ān* - *f*  *her*  *teṭ*  *nes*  *set*  *āhā*

In the limits of this little book it is impossible to set before the reader examples of the use of the various parts of the verb, and to illustrate the forms of it which have been identified with the Infinitive and Imperative moods and with participial forms. If the Egyptian verb is to be treated as a verb in the Semitic languages we should expect to find forms corresponding to the Kal, Niphal, Piel, Pual, Hiphil, Shaphel, and other conjugations, according as we desired to place it in the Southern or Northern group of Semitic dialects. Forms undoubtedly exist which lend themselves readily to Semitic nomenclature, but until all the texts belonging

to all periods of the Egyptian language have been published, that is to say, until all the material for grammatical investigation has been put into the Egyptologists' hands, it is idle to attempt to make a final set of grammatical rules which will enable the beginner to translate any and every text which may be set before him. In many sentences containing numerous particles only the general sense of the text or inscription will enable him to make a translation which can be understood. In a plain narrative the verb is commonly a simple matter, but the addition of the particles occasions great difficulty in rendering many passages into a modern tongue, and only long acquaintance with texts will enable the reader to be quite certain of the meaning of the writer at all times. Moreover, allusions to events which took place in ancient times, with the traditions of which the writer was well acquainted, increase the difficulty. This being so it has been thought better to give at the end of the sketch of Egyptian grammar a few connected extracts from texts, with interlinear transliteration and translation, so that the reader may judge for himself of the difficulties which attend the rendering of the Egyptian verb into English.

CHAPTER X.

ADVERBS, PREPOSITIONS, CONJUNCTIONS, PARTICLES.

ADVERBS.

In Egyptian the prepositions and certain substantives and adjectives to which  *er* is prefixed take the place of adverbs; examples are:—

1. The cattle which were before him became

						
<i>nefer</i>	<i>er</i>	<i>āqer</i>	<i>sep</i>	<i>sen</i>	<i>qeb</i>	<i>- sen</i>
fine	exceedingly,	twice,	they doubled			

					
<i>mesu</i>	<i>- sen</i>	<i>er</i>	<i>āqer</i>	<i>sep</i>	<i>sen</i>
their births		exceedingly, twice.			

2.        
- un* *set* *nefer* *er* *āa* - *ur* *her* *āb*
- Was the woman fair exceedingly to the mind

of his majesty more than any thing.

immediately.

PREPOSITIONS.

Prepositions, which may also be used adverbially, are simple and compound. The simple prepositions are :—

1. *en* for, to, in, because.
2. *em* from, out of, in, into, on, among, as, conformably to, with, in the state of, if, when.

<i>Pepi</i>	<i>pu</i>	<i>χer</i>	<i>Tem</i>

Pepi this before Tem.

The above passage is an address made to the dead king Pepi by the priest which declares that he is ceremonially pure and fit for heaven. The *ka*, *ba* and *sekhem*, were the "double" of a man, his soul, and the power which animated and moved the spiritual body in heaven; the entire economy of a man consisted of *khat* body, *ka* double, *ba* soul, *khaibit* shadow, *khu* spirit, *āb* heart, *sekhem* power, *ren* name, and *sāhu* spiritual body. The reference to the bringing of the bones seems to refer to the dismemberment of bodies which took place in pre-dynastic times, and the mention of the receiving of the head refers to the decapitation of the dead which was practised in the earliest period of Egyptian history. Nut was the mother of the gods and Seb was her husband ; Tem or Temu was the setting sun, and, in funeral texts, a god of the dead.
